

SYNTHETIC TEST DATA - NOT A VALID ATO

Assessment Plan, Report and Remediation

Flank Speed IL5 - Microsoft 365 DoD Tenant (Synthetic)

Fixture / version: SYN-FS-IL5-001 / 2.0

Scenario date: 2026-09-24

Environment: Flank Speed-inspired Microsoft 365 DoD collaboration tenant, using the Office 365 DoD service environment as public context rather than GCC High. Exchange Online, SharePoint Online, OneDrive, and Teams are candidate in-scope service workloads; their actual tenant provisioning and authorized service boundaries have not been verified. The modeled boundary is tenant configuration and operation plus explicitly qualified candidate inherited service protections.

SYNTHETIC TEST DATA - NOT A VALID ATO

A production-style SAP/SAR/risk/POA&M companion. No actual assessment was performed. Six invented open findings are evidence-gap scenarios, not allegations about the Navy or Microsoft's operating service.

This is an original production-style test scenario. It is not an official Navy, Microsoft, DISA, eMASS or FedRAMP submission. All operational settings and findings are invented; public service descriptions do not establish this tenant's authorization or control effectiveness.

Milestone	Fixture disposition
Source documents	Generated synthetic reference material
Assessment evidence	Four fictional samples; other evidence explicitly absent
Control status	Illustrative; not assessed
Authorization	Unsigned, not effective; no inheritance verified
SPIN workflow	Receipt, analysis, review, approval and publication remain separate

SYNTHETIC TEST DATA - NOT A VALID ATO

1. Assessment plan and rules of engagement

Scope: Notional maritime-support collaboration for 2,400 synthetic workforce accounts organized into six invented mission groups. The scenario covers messaging, meetings, controlled document collaboration, records obligations, and incident coordination. Every account, configuration, event, exception, and assessment observation in this fixture is invented. No actual Navy mission, configuration, tenant, authorization, or assessment is represented.

Methods follow the examine/interview/test structure described by NIST SP 800-53A. The forty SSP controls are a representative exercise scope. Sampling and thresholds are notional local targets, not DoD mandates.

Stage	Required activity	Exit condition
Preparation	Agree the exact tenant/boundary version, assessor independence, licensed service inventory, evidence handling and named approvals.	Approved plan and rules of engagement; none issued in this fixture.
Examine	Review dated exports, role grants, change records, logging coverage, retention decisions and current provider inheritance evidence.	Each evidence item has identity, date, scope, custodian and integrity record.
Interview	Interview operator, command data owner, SOC, privacy and continuity roles. Reconcile inconsistent descriptions with recorded configurations.	Reviewed interview notes and explicit unresolved questions.
Test	Use isolated test identities and invented records. Check allowed/denied access, revocation, approved sharing, telemetry delivery and scoped restore.	Expected/observed results and repeatable evidence; no production testing here.
Report	Record limitations, unmet criteria, source severity and remediation.	Independent assessor review; findings remain open until evidence is accepted.

Prohibited activity

No live scanning, account creation, privilege escalation, tenant changes or external file transfer is authorized by these documents. No real PII or CUI may be introduced into this local fixture.

SYNTHETIC TEST DATA - NOT A VALID ATO

2. Assessment results and risk summary

Illustrative outcome: 2 High, 3 Moderate and 1 Low open findings. These source-stated labels exercise review and prioritization; no real risk score, risk acceptance, control pass or ATO recommendation is issued.

Finding	Severity / status	Controls	Evidence references
FS-FIND-001 Synthetic gap: two privileged assignments lack current independent review	High Open	AC-2, AC-6, IA-2	FS-EV-002, FS-EV-007
FS-FIND-002 Synthetic gap: guest-sharing exception lacks expiry and complete exchange approval	Moderate Open	AC-3, AC-4, AC-20, CA-3, PT-2	FS-EV-003, FS-EV-008, FS-EV-015
FS-FIND-003 Synthetic gap: Teams policy events absent from audit-source coverage	Moderate Open	AU-2, AU-3, AU-6, AU-11	FS-EV-001, FS-EV-009
FS-FIND-004 Synthetic gap: recovery rehearsal does not cover all workloads or permissions	Moderate Open	CP-2, CP-4, CP-9, CP-10	FS-EV-004, FS-EV-011
FS-FIND-005 Synthetic gap: provider inheritance and cryptographic applicability evidence not supplied	High Open	MA-2, PE-3, RA-5, SA-9, SC-7, SC-8, SC-13, SC-28, SI-2	FS-EV-005, FS-EV-014, FS-EV-016
FS-FIND-006 Synthetic gap: blocked retention proposal lacks resolved legal-hold precedence	Low Open	AU-11, CM-3, MP-6	FS-EV-003, FS-EV-010

All other controls remain illustrative and unassessed, not implicitly passed. Missing provider evidence is an inheritance-verification gap, not proof that the provider's control failed.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-001 | Synthetic gap: two privileged assignments lack current independent review

Source severity / workflow state: High / Open

Controls / components: AC-2, AC-6, IA-2 / FS-CMP-001, FS-CMP-002

Illustrative observation

In the invented worksheet as of 2026-09-24, two of twelve privileged assignments lack current independent review: exercise-admin-11 last reviewed 2026-07-31 and exercise-admin-12 last reviewed 2026-08-15. Ten other entries are fictional current-review examples, not accepted approvals. The authoritative roster is not supplied. This is a scenario finding only, not an observation about a Navy tenant or Microsoft service.

Potential impact in this scenario

If the condition existed operationally, unjustified administrative privileges could persist and weaken accountability for tenant-wide policy changes. The fixture demonstrates review and closure workflow risk, not actual compromise.

Recommended response

Reconcile all twelve assignments to authoritative eligibility and task need; independently approve or remove each; verify effective denial after removal; establish monthly review with escalation for overdue items and separately verify any optional privileged-management tooling.

Evidence references: FS-EV-002, FS-EV-007

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-002 | Synthetic gap: guest-sharing exception lacks expiry and complete exchange approval

Source severity / workflow state: Moderate / Open

Controls / components: AC-3, AC-4, AC-20, CA-3, PT-2 / FS-CMP-004, FS-CMP-005, FS-CMP-006, FS-CMP-009

Illustrative observation

One of twenty invented exception records, the exercise-site-blue proposal in the change worksheet, has no expiry and only a draft approval field. No live link was created and the complete recipient/exchange register is not supplied. The scenario extends review to OneDrive and Teams because those paths share the intended exception governance, not because actual cross-workload exposure was observed.

Potential impact in this scenario

An operational equivalent could allow external collaboration beyond the sponsor's intended period or without compatible processing authority. The magnitude of any real exposure is unknown and no disclosure is asserted.

Recommended response

Keep the proposed exchange restricted; obtain mission/privacy and recipient-system approval, set at most thirty-day expiry, inventory related links/memberships, and demonstrate revocation with negative-access tests for all affected workload paths.

Evidence references: FS-EV-003, FS-EV-008, FS-EV-015

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-003 | Synthetic gap: Teams policy events absent from audit-source coverage

Source severity / workflow state: Moderate / Open

Controls / components: AU-2, AU-3, AU-6, AU-11 / FS-CMP-006, FS-CMP-008

Illustrative observation

The invented audit worksheet represents seven of eight required source categories and omits Teams policy events. No real collection run, event availability verification, schema mapping, or retention retrieval was performed. The missing source is a fictional evidence/coverage condition, not a claim that Microsoft does not supply such events.

Potential impact in this scenario

An operational blind spot could prevent timely review of collaboration policy changes and leave investigation or retention requirements unmet. Coverage and timeliness cannot be demonstrated from the sample.

Recommended response

Verify DoD service/SKU event availability, map supported Teams events, configure only approved collection paths, collect safe test events, validate required fields and ingestion timing, and document residual gaps if the required events are unavailable.

Evidence references: FS-EV-001, FS-EV-009

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-004 | Synthetic gap: recovery rehearsal does not cover all workloads or permissions

Source severity / workflow state: Moderate / Open

Controls / components: CP-2, CP-4, CP-9, CP-10 / FS-CMP-003, FS-CMP-004, FS-CMP-005, FS-CMP-006, FS-CMP-012

Illustrative observation

The fictional recovery worksheet scripts one mailbox item and a partial SharePoint comparison, leaves permissions pending, and does not rehearse OneDrive or Teams. It does not satisfy the planned twelve-object/four-workload scope. There are no actual restore logs, supported recovery-source inventory, or data-owner reconciliation records.

Potential impact in this scenario

If an operational plan relied on this level of coverage, mission recovery timing, content completeness, permissions, and ownership could remain uncertain. No provider outage, data loss, or service defect is alleged.

Recommended response

Verify recoverable object types and source limits first; execute an authorized isolated four-workload rehearsal with at least three inert objects each; reconcile permissions/ownership/links and measure timing; address unsupported recovery cases through explicit risk decisions.

Evidence references: FS-EV-004, FS-EV-011

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-005 | Synthetic gap: provider inheritance and cryptographic applicability evidence not supplied

Source severity / workflow state: High / Open

Controls / components: MA-2, PE-3, RA-5, SA-9, SC-7, SC-8, SC-13, SC-28, SI-2 / FS-CMP-001, FS-CMP-003, FS-CMP-004, FS-CMP-005, FS-CMP-006, FS-CMP-007, FS-CMP-008, FS-CMP-012

Illustrative observation

The fixture contains public-context references but no current authorized provider package, tenant-applicable service boundary, responsibility matrix, cryptographic mechanism/module applicability, or provider assessment evidence. The gap is absence of evidence in this synthetic package, not a finding that Microsoft lacks controls or that a real Navy authorization is invalid.

Potential impact in this scenario

Crediting inherited physical, maintenance, platform, boundary, or cryptographic controls without applicable evidence could materially misstate an authorization basis. Public service inclusion alone cannot resolve the uncertainty.

Recommended response

Request the appropriate authorized provider/customer-responsibility evidence through approved channels; reconcile exact DoD services and cryptographic requirements; document retained duties and unsupported claims; obtain independent applicability review before any inheritance credit or real decision.

Evidence references: FS-EV-005, FS-EV-014, FS-EV-016

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-FIND-006 | Synthetic gap: blocked retention proposal lacks resolved legal-hold precedence

Source severity / workflow state: Low / Open

Controls / components: AU-11, CM-3, MP-6 / FS-CMP-003, FS-CMP-004, FS-CMP-005, FS-CMP-006, FS-CMP-010, FS-CMP-011

Illustrative observation

The invented exercise-site-green change proposes a two-year disposition rule while a preservation instruction is also listed; the conflict review is missing. The proposal is explicitly blocked and no policy promotion or deletion occurred, supporting the Low scenario rating. Actual records authority, hold scope, and service feature behavior are not supplied.

Potential impact in this scenario

Unresolved instructions could cause future misconfiguration or unauthorized disposition if a blocked proposal were promoted. This is not a claim of existing legal-hold failure or data destruction.

Recommended response

Keep the proposal blocked; obtain records/counsel authority, reconcile retention versus preservation across affected workloads, verify supported feature behavior, test held and eligible objects, and require independent approval before promotion.

Evidence references: FS-EV-003, FS-EV-010

Assessment date: 2026-09-24 (fictional scenario). Assessor: Synthetic independent assessor role. No actual service testing occurred.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-001 | Remediation plan

Linked finding: FS-FIND-001

Owner: FS-ROLE-003

Workflow status: Open

Reconcile the full privileged roster, independently review both overdue scenario assignments, remove unjustified access, and establish measurable monthly recertification. Future evidence must replace invented worksheet entries rather than relabel them accepted.

Resources / dependencies: Notional 24 identity-engineer hours, 8 independent-reviewer hours, and mission-owner availability; no expenditure, staffing commitment, or optional product license is approved.

Scheduled completion (notional): 2026-10-23

Milestone	Due date
Obtain authoritative roster and reconcile all twelve assignments; preserve unresolved state for missing approvals.	2026-09-30
Complete independent approve/remove decisions and verify denied access for removals in an authorized test.	2026-10-09
Submit proposed evidence for independent retest and monthly-review readiness assessment; closure remains contingent on acceptance.	2026-10-23

Required closure evidence

- Required future evidence, not submitted: a post-correction privileged-assignment export covering all 12 assignments in FS-CMP-001 and FS-CMP-002, with exact tenant/test-boundary identification, UTC collection time, baseline/configuration revision, export integrity digest, role scope, sponsor, and eligibility source; target review date 2026-10-23.
- Required future evidence, not submitted: independent approve-or-remove records for all 12 assignments, explicitly resolving exercise-admin-11 and exercise-admin-12, with decision dates, assignment and roster revisions, business justification, approver accountability, and removal timestamps where applicable.
- Required future evidence, not submitted: authorized post-removal negative-access and least-privilege retest records identifying tested identities, role/action scope, configuration revision, actual UTC execution times, expected versus observed results, and monthly-review escalation verification; no credentials or synthetic worksheet results may substitute for executed tests.
- Required future evidence, not submitted: a dated independent reviewer acceptance record for FS-FIND-001 identifying the exact export, decision-record, and retest revisions reviewed, confirming 12-of-12 current review coverage and resolution of both overdue assignments; the POAM remains Open until actual acceptance.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-002 | Remediation plan

Linked finding: FS-FIND-002

Owner: FS-ROLE-004

Workflow status: Open

Keep the unbounded exchange restricted, complete sponsor/recipient/processing approvals, set expiry, reconcile all twenty exceptions, and test revocation across SharePoint, OneDrive, and Teams as applicable.

Resources / dependencies: Notional 20 workload-engineer hours, 8 mission/privacy-review hours, and 4 independent-tester hours; cloud/SKU constraints must be checked before selecting automation.

Scheduled completion (notional): 2026-10-30

Milestone	Due date
Inventory all twenty exceptions and flag absent sponsor, recipient conditions, approval, or expiry.	2026-10-02
Obtain missing decisions and configure only supported approved restrictions in the authorized test scope.	2026-10-16
Demonstrate expired/unapproved recipient denial and submit the complete register for independent closure review.	2026-10-30

Required closure evidence

- Required future evidence, not submitted: a versioned register covering all 20 guest-sharing exceptions, including the exercise-site-blue proposal, with exact SharePoint, OneDrive, and Teams path scope, sponsor, recipient eligibility, purpose/privacy and exchange approvals, start/expiry dates, approval dates, and register revision; target review date 2026-10-30.
- Required future evidence, not submitted: post-correction sharing-policy, link, and membership exports for affected FS-CMP-004, FS-CMP-005, FS-CMP-006, and FS-CMP-009 scope, recording UTC collection times, exact baseline/configuration revisions, supported DoD cloud/SKU mechanisms, and expiry no longer than 30 days.
- Required future evidence, not submitted: authorized positive and negative access tests for approved, unapproved, expired, and revoked recipients on every affected workload path, identifying exact inert objects, policy revisions, UTC test times, expected/observed outcomes, and verified denial after expiry or revocation.
- Required future evidence, not submitted: dated independent reviewer acceptance for FS-FIND-002 citing exact register, export, approval, and test revisions, confirming complete 20-of-20 governance coverage and tested denial on affected paths; an edited expiry field alone is insufficient for closure.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-003 | Remediation plan

Linked finding: FS-FIND-003

Owner: FS-ROLE-005

Workflow status: Open

Verify Teams DoD event availability and licensing, complete the eight-source matrix, collect approved safe test events, and demonstrate field completeness, collection delay, retention support, and analyst routing. Document unavailable event classes without manufacturing substitute logs.

Resources / dependencies: Notional 32 SOC-engineer hours, 8 workload-lead hours, and supplier-liaison time; additional licensing or external storage requires separate approval.

Scheduled completion (notional): 2026-11-13

Milestone	Due date
Confirm source availability and gaps against the actual approved service/SKU documentation.	2026-10-07
Complete supported collection configuration and eight-source test-event/field reconciliation.	2026-10-23
Submit timing, routing, and available historical-retention evidence; explicitly retain any age-boundary or unsupported-source gap.	2026-11-13

Required closure evidence

- Required future evidence, not submitted: an eight-source availability and collection matrix explicitly covering Teams policy events in FS-CMP-006 and FS-CMP-008, with exact event categories, DoD cloud/SKU verification, collection configuration revision, verification date, accountable owner, and supported retention limits; target review date 2026-11-13.
- Required future evidence, not submitted: dated collection exports and 40 raw-to-normalized event comparisons, five per required source, identifying exact configuration/schema revisions, actual UTC event and ingestion times, required-field mappings, provenance, integrity digests, and safe test-event retrieval results.
- Required future evidence, not submitted: executed analyst-routing and retention-retrieval tests recording exact source/query scope, configuration revision, UTC execution times, ingestion-to-triage timing, and genuine available age-boundary evidence against the approved 90-day searchable and 365-day protected targets; insufficient elapsed history or unavailable sources must remain unresolved, not simulated as passing.
- Required future evidence, not submitted: dated independent reviewer acceptance for FS-FIND-003 citing exact matrix, export, mapping, and test revisions and confirming eight-of-eight coverage, required fields, approved collection delays, routing, and retention support; any unresolved source or age-boundary requirement prevents routine closure.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-004 | Remediation plan

Linked finding: FS-FIND-004

Owner: FS-ROLE-010

Workflow status: Open

Establish a verified workload recovery-source inventory and execute the full four-workload/twelve-object rehearsal with permission, ownership, linked-content, audit, timing, and data-owner checks. Unrecoverable object classes require explicit treatment rather than assumed backup coverage.

Resources / dependencies: Notional 40 workload-engineer hours, 16 continuity/test hours, and 8 data-owner hours in an authorized isolated environment; no third-party backup acquisition is assumed.

Scheduled completion (notional): 2026-11-20

Milestone	Due date
Verify supported recovery mechanisms, object types, prerequisite permissions, and actual recovery-source ages.	2026-10-09
Approve inert exercise objects and execute mailbox, SharePoint, OneDrive, and Teams-linked recovery cases.	2026-11-06
Reconcile outcomes and unsupported cases with data owners and submit independent retest material for review.	2026-11-20

Required closure evidence

- Required future evidence, not submitted: a dated and versioned recovery-source inventory and approved exercise plan for Exchange, SharePoint, OneDrive, and Teams-linked recovery across FS-CMP-003 through FS-CMP-006 and FS-CMP-012, specifying exact object classes, supported DoD cloud/SKU mechanisms, source ages, prerequisites, limits, and recovery baseline revision; target review date 2026-11-20.
- Required future evidence, not submitted: before/after manifests and executed restore records for at least 12 inert objects, three per workload, identifying exact objects and configuration revisions, actual UTC start/end times, source age, content integrity comparisons, ownership, permissions, linked references, and every unsupported or failed case.
- Required future evidence, not submitted: dated data-owner reconciliation and post-recovery tests proving required permissions, revoked-user denial, linked-content access, and audit visibility for the exact restored scope, with approved objective comparisons and explicit treatment of deviations; retention or version-history descriptions alone are insufficient.
- Required future evidence, not submitted: dated independent observer/reviewer acceptance for FS-FIND-004 citing exact plan, inventory, manifest, execution, and reconciliation revisions, confirming four-workload/twelve-object coverage and disposition of recovery gaps; the fictional partial worksheet cannot establish closure.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-005 | Remediation plan

Linked finding: FS-FIND-005

Owner: FS-ROLE-009

Workflow status: Open

Obtain applicable authorized provider evidence through approved channels and map service boundaries, cryptographic requirements, platform duties, and retained customer responsibilities. Keep all inheritance claims unresolved until independent review; a public URL is not closure evidence.

Resources / dependencies: Notional 24 supplier-assurance hours, 24 security-architect hours, and 16 independent-assessor hours; access to restricted evidence depends on legitimate customer eligibility and provider process.

Scheduled completion (notional): 2026-11-30

Milestone	Due date
Document exact requested evidence and authorized access path without sending sensitive content or assuming entitlement.	2026-10-02
Review received evidence if legitimately available; record any missing scope, module applicability, or retained duty without substituting public descriptions.	2026-10-30
Submit service-specific inheritance matrix and unresolved limitations for independent assessment and real authority consideration; extend POAM if evidence remains absent.	2026-11-30

Required closure evidence

- Required future evidence, not submitted: legitimately obtained authorized provider assurance material applicable to the exact Office 365 DoD service boundary and affected identity, collaboration, access-interface, audit, and continuity dependencies in FS-FIND-005, recording document identifiers/revisions, issue and validity dates, authorized handling conditions, and customer access provenance; target review date 2026-11-30.
- Required future evidence, not submitted: a dated service-specific inheritance and cryptographic applicability matrix mapping MA-2, PE-3, RA-5, SA-9, SC-7, SC-8, SC-13, SC-28, and SI-2 to exact provider document revisions, service/mechanism/module scope, applicable customer requirements, retained duties, and excluded support/external systems.
- Required future evidence, not submitted: a documented applicability examination and safe tenant-setting verification where relevant, with exact assessment date, service/configuration revision, evidence citations, expected versus observed mappings, and resolution of missing or contradictory claims; no unauthorized provider scanning, public-page substitution, or invented cryptographic attestation.
- Required future evidence, not submitted: dated independent assessor acceptance for FS-FIND-005 identifying every reviewed package and matrix revision and confirming current applicable support for all proposed inherited claims; any residual uncertainty requires explicit real-authority disposition and cannot be represented as evidence that the missing protection was verified.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

FS-POAM-006 | Remediation plan

Linked finding: FS-FIND-006

Owner: FS-ROLE-006

Workflow status: Open

Maintain the retention proposal's blocked state, obtain authoritative schedule and preservation instructions, resolve precedence and scope, verify actual feature support, and demonstrate held-object protection before any approved policy promotion.

Resources / dependencies: Notional 16 records/privacy hours, 12 workload-engineer hours, 4 independent-test hours, and authorized counsel review; invented retention periods require real authority before operational adoption.

Scheduled completion (notional): 2026-11-06

Milestone	Due date
Identify every affected workload and reconcile proposed schedules with preservation scope and custodians.	2026-10-02
Obtain authorized conflict resolution and verify retention/hold feature behavior for the actual DoD service/SKU.	2026-10-23
Test five held and five eligible inert objects, document independent change review, and submit results for possible closure.	2026-11-06

Required closure evidence

- Required future evidence, not submitted: authorized records/counsel conflict-resolution instructions for the exercise-site-green proposal and every affected Exchange, SharePoint, OneDrive, and Teams content path, with exact schedule/hold scope, custodians, authority dates, instruction revisions, preservation precedence, and release conditions; target review date 2026-11-06.
- Required future evidence, not submitted: dated post-resolution retention/hold configuration exports and a revised change record for FS-CMP-010 and FS-CMP-011, identifying exact workload scopes, DoD cloud/SKU support, baseline and policy revisions, UTC collection times, independent approval, and continued promotion blocking until prerequisites are met.
- Required future evidence, not submitted: authorized test records for five held and five eligible inert objects with exact identifiers, workload mapping, policy revisions, actual UTC execution times, expected/observed preservation and disposition behavior, and release checks; held objects must not be disposed without authorized release.
- Required future evidence, not submitted: dated independent reviewer acceptance for FS-FIND-006 citing exact authority, instruction, export, change, and test revisions and confirming resolved precedence plus ten-object coverage; records/counsel and change-board decisions must be evidenced before any permitted promotion or proposed closure.

Submitted closure evidence: none. Evidence upload, source text and due dates never close a finding. A separate authorized reviewer must evaluate the exact finding revision and supporting evidence.

SYNTHETIC TEST DATA - NOT A VALID ATO

3. Assessment limitations and AO handoff

This package supplies scenario records and sample artifacts only. The real assessor would reconcile all controls/enhancements, verify current provider documents, observe tests, identify unsupported services and report residual risk. The AO decides authorization; the tool does not.

- Original synthetic test scenario only. Flank Speed-inspired naming is contextual and does not reproduce or verify the Navy's actual configuration, operational boundary, assessment, or ATO.
- The parent verified the four public reference pages listed below on 2026-09-24. This authoring task made no network requests and did not independently re-fetch those pages.
- The Navy public Flank Speed page could not be retrieved by the parent; no Navy-specific configuration or current authorization status was verified.
- Office 365 DoD is not interchangeable with GCC High. Public service inclusion and IL5 context do not establish the fictional tenant's authorization or inheritance.
- Every inventory entry, target, role, organization, count, event, timestamp, observation, and remediation schedule is notional. No actual assessment procedures, tenant commands, scanning, support requests, or restoration actions were performed.
- No control is claimed implemented, effective, certified, or satisfied. All forty controls are illustrative and not assessed; provider duties are candidates awaiting applicable evidence.
- Only four meaningful invented samples are included; the remaining twelve evidence entries are Not supplied with empty sampleText. None of the sixteen entries is accepted operational evidence.
- All six findings are fictional and Open: two High, three Moderate, one Low. They describe this scenario's review/evidence gaps, not actual vulnerabilities or defects in Navy or Microsoft systems.
- All six matching POAMs have future milestones and empty closureEvidence arrays. No corrective action has been submitted, accepted, or closed.
- The control set is representative, not a complete IL5, FedRAMP High, CNSSI 1253, NIST enhancement, or organization-tailored baseline. Actual control selection and parameters require authority review.
- Cloud, SKU, license, feature behavior, and authorized-boundary availability must be verified for any Purview, Defender, advanced audit, retention/hold, information protection, conditional-access, privileged-management, or other optional mechanism.
- Endpoints, endpoint-management platforms, customer networks, external federation infrastructure, recipient systems, external SIEM/evidence storage, third-party backup, arbitrary Azure resources, and support handling remain outside the modeled tenant boundary.
- No Azure Key Vault, IaaS firewall, VM inventory, AI/Copilot service, unapproved application, real person, real government identifier, credential, signature, seal, classified information, or operational CUI is included.
- Retention, version history, recycle bins, and holds have purpose-specific limits and do not guarantee complete backup, recovery, or preservation of every workload object, permission, or dependency.
- Contacts are nonoperational example.test addresses. Notional reporting times are not asserted as actual DoD regulatory deadlines or contractual service guarantees.
- Evidence cross-references identify planned relevance and requested artifacts, not proof that an artifact exists or satisfies a control. Missing provider evidence is not proof that the provider lacks the underlying protection.
- The decision is an unsigned illustrative conditional ATO draft, not effective. Importing, rendering, publishing a fixture, or reaching a proposed date cannot activate it.

SYNTHETIC TEST DATA - NOT A VALID ATO

- This JSON is a document-content fixture, not OSCAL, an official eMASS/FedRAMP submission template, a source of legal advice, or an application test-result report. Parent generation and manual application validation remain separate.
