

SYNTHETIC TEST DATA - NOT A VALID ATO

Unsigned Authorization Decision Draft

Flank Speed IL5 - Microsoft 365 DoD Tenant (Synthetic)

Fixture / version: SYN-FS-IL5-001 / 2.0

Scenario date: 2026-09-24

Environment: Flank Speed-inspired Microsoft 365 DoD collaboration tenant, using the Office 365 DoD service environment as public context rather than GCC High. Exchange Online, SharePoint Online, OneDrive, and Teams are candidate in-scope service workloads; their actual tenant provisioning and authorized service boundaries have not been verified. The modeled boundary is tenant configuration and operation plus explicitly qualified candidate inherited service protections.

SYNTHETIC TEST DATA - NOT A VALID ATO

A decision-reference exercise, not an authorization instrument. No official signature, seal, eMASS identifier, valid effective date or verified provider authorization is supplied.

This is an original production-style test scenario. It is not an official Navy, Microsoft, DISA, eMASS or FedRAMP submission. All operational settings and findings are invented; public service descriptions do not establish this tenant's authorization or control effectiveness.

Milestone	Fixture disposition
Source documents	Generated synthetic reference material
Assessment evidence	Four fictional samples; other evidence explicitly absent
Control status	Illustrative; not assessed
Authorization	Unsigned, not effective; no inheritance verified
SPIN workflow	Receipt, analysis, review, approval and publication remain separate

SYNTHETIC TEST DATA - NOT A VALID ATO

Proposed decision context - not issued

Reference: SYN-FS-DECISION-001

Authority placeholder: Unassigned synthetic AO role

Decision type: Unsigned illustrative conditional ATO draft

Actual status: Draft - unsigned - not effective

Proposed start only: 2026-10-01

Proposed expiration only: 2027-09-30

Scope: Illustrative decision worksheet for SYN-FS-IL5-001, limited to the twelve notional tenant service/operational components and their qualified candidate provider dependencies. It does not authorize a real tenant, Navy mission, external endpoint/network, support service, AI/Copilot service, or unapproved integration. Proposed dates are placeholders and do not imply permission to operate.

Actual issuance / effective date: Not established

Signature / verification: Absent; no official has reviewed or signed this draft

Proposed conditions

- Before any real decision, designate a legitimate authorizing official, approve mission categorization and the full applicable baseline, and obtain an actual independent assessment.
- Resolve or explicitly disposition FS-FIND-001 and FS-FIND-005 with applicable evidence and real authority; an invented high-severity POAM schedule is not risk acceptance.
- Keep the unbounded guest-sharing proposal restricted until FS-FIND-002 is independently reviewed and authorized exchange conditions are met.
- Demonstrate audit source/retention coverage for FS-FIND-003 and supported four-workload recovery for FS-FIND-004, or obtain explicit documented risk treatment from a real authority.
- Keep the conflicting retention proposal blocked until FS-FIND-006 has authoritative records/hold resolution, verified technical behavior, and independent change review.
- Maintain all six POAMs as Open with empty closureEvidence arrays as of 2026-09-24; future milestones and anticipated artifacts are not submitted or accepted closure.
- Require verified service/cloud/SKU availability and authorized-boundary applicability for every optional information-protection, audit, recovery, or privileged-management feature before crediting it.
- Apply the monitoring and incident handoff plan only after actual customer authority, contacts, tools, and evidence paths are established; no fixture contact is operational.

Qualifications

- This draft is unsigned, ineffective, and not an ATO, authorization recommendation, interim approval, operating permission, or acceptance of risk.
- No real Navy, Microsoft, DISA, or government official participated in, approved, or signed this synthetic scenario.
- The proposed start date precedes several future remediation milestones solely to exercise conditional-decision review logic; it does not permit operation while conditions are unmet.
- The forty-control subset cannot establish complete IL5/FedRAMP/CNSSI baseline coverage, and the working categorization is not approved.

SYNTHETIC TEST DATA - NOT A VALID ATO

- No provider authorization package, cryptographic attestation, tenant configuration export, actual assessment, or independent closure evidence is supplied.
- Public Office 365 DoD/IL5 documentation establishes context only; it is not tenant authorization, assurance of every optional feature, or proof of control effectiveness.

No mission system ATO, covered-workload finding, inherited control acceptance or reusable capability publication is granted by importing this document. Proposed dates must not be stored as the dates of an issued authorization.

Decision review and release checklist

Required check	This fixture
Actual authorizing official and authority verified	Not supplied
Current provider scope and inheritance evidence reviewed	Not supplied
System categorization and complete tailored baseline approved	Representative subset only
Independent assessment and closure/accepted residual risk	Six fictional open findings; no real assessment
Exact boundary, dependencies and impact preview reviewed	Requires application/operator review
Signed and dated decision with limitations and expiration	Unsigned draft; no effective authorization
Capability publication separated from mission authorization	Required; never inferred from upload or confidence
