

Synthetic provider ATO package

Purpose

Fictional test material for CSP onboarding, package extraction, portal review and publication gates. No real organization, authorization, classified content, CUI, credentials or production infrastructure is represented.

Package identity

Package ID: TEST-ATO-HARBOR-001. Version: 1.0. Date: 2026-09-23. Provider: Harbor Example Cloud. System Name: Harbor Example Platform. System Identifier: TEST-HARBOR-001. Test impact baseline: Moderate.

Contents

Pages 2 through 6 contain the system security plan and component implementation statements. Page 7 contains the customer responsibility matrix. Page 8 contains an assessment summary and remediation plan. Page 9 contains a fictional authorization reference. The accompanying JSON repeats component identities to exercise cross-source reconciliation.

Test interpretation

The four components and six capabilities are candidate records. Control references are illustrative test mappings, not a compliance assessment. This package is deliberately smaller than a real authorization submission. No part of it grants an ATO.

System security plan

System identification

System Name: Harbor Example Platform. System Acronym: HEP. System Owner: Harbor Example Cloud Test Team. System Description: A fictional shared-service platform providing identity, key management, backups and monitoring to customer applications.

Authorization boundary

The provider boundary includes CMP-001 through CMP-004. Customer application code, endpoint devices, mission databases and user eligibility decisions are outside the provider boundary. Shared responsibilities are described on page 7.

Information and categorization

All information in this fixture is synthetic test data. The fictional system uses a Moderate test baseline for NIST SP 800-53 control mapping exercises; this is not a formal categorization decision.

Data flow

Mission users authenticate through Harbor Identity Service. Customer workloads request cryptographic operations from Harbor Key Vault. Harbor Backup Service stores encrypted platform backups. Harbor Security Monitoring receives security events from all three services and escalates incidents to a test mission contact.

Operational context

Provider administrators operate only the shared services. Mission owners retain responsibility for their own system applicability, evidence, risk acceptance and authorization decisions.

Harbor Identity Service

Component identity

CMP-001: Harbor Identity Service. Type: identity. Owner: Harbor Example Cloud Test Operations. Central identity service with MFA, access policy enforcement and quarterly access reviews.

CAP-001 Multi factor authentication

Proposed control mapping: IA-2. Provider implementation: Enforce MFA for provider privileged access. Customer responsibility: Enroll mission users and review their application access. Source component: CMP-001.

CAP-002 Account lifecycle management

Proposed control mapping: AC-2. Provider implementation: Disable provider accounts within 24 hours of termination notice. Customer responsibility: Submit timely access changes and approve mission application privileges. Source component: CMP-001.

Evidence and review

Synthetic implementation statement only. A reviewer must validate scope, source support and responsibility allocation before approving this candidate. No record is authorized for publication solely because it appears in this document.

Harbor Key Vault

Component identity

CMP-002: Harbor Key Vault. Type: service. Owner: Harbor Example Cloud Test Operations. Managed cryptographic key storage with access logging and scheduled rotation.

CAP-003 Cryptographic key management

Proposed control mapping: SC-12. Provider implementation: Manage platform key rotation every 180 days and restrict administrative access. Customer responsibility: Define application key owners and review application key usage. Source component: CMP-002.

Evidence and review

Synthetic implementation statement only. A reviewer must validate scope, source support and responsibility allocation before approving this candidate. No record is authorized for publication solely because it appears in this document.

Harbor Backup Service

Component identity

CMP-003: Harbor Backup Service. Type: service. Owner: Harbor Example Cloud Test Operations. Encrypted scheduled backups and isolated restore testing for platform workloads.

CAP-004 Backup and recovery

Proposed control mapping: CP-9. Provider implementation: Perform daily backups, retain 35 days, and test restoration quarterly. Customer responsibility: Define mission recovery objectives and verify application consistency after restore. Source component: CMP-003.

Evidence and review

Synthetic implementation statement only. A reviewer must validate scope, source support and responsibility allocation before approving this candidate. No record is authorized for publication solely because it appears in this document.

Harbor Security Monitoring

Component identity

CMP-004: Harbor Security Monitoring. Type: service. Owner: Harbor Example Cloud Test Operations. Central event collection, daily triage and incident escalation for platform services.

CAP-005 Security event monitoring

Proposed control mapping: AU-6. Provider implementation: Review platform alerts daily and retain searchable logs for 90 days. Customer responsibility: Review mission application events and investigate application-specific alerts. Source component: CMP-004.

CAP-006 Incident escalation

Proposed control mapping: IR-4. Provider implementation: Escalate suspected platform incidents to the mission contact within one hour of triage. Customer responsibility: Maintain an incident contact and coordinate mission impact assessment. Source component: CMP-004.

Evidence and review

Synthetic implementation statement only. A reviewer must validate scope, source support and responsibility allocation before approving this candidate. No record is authorized for publication solely because it appears in this document.

Customer responsibility matrix

CAP-001 | IA-2 | CMP-001

Capability: Multi factor authentication. Provider: Enforce MFA for provider privileged access. Customer: Enroll mission users and review their application access. Allocation proposed for review: Shared.

CAP-002 | AC-2 | CMP-001

Capability: Account lifecycle management. Provider: Disable provider accounts within 24 hours of termination notice. Customer: Submit timely access changes and approve mission application privileges. Allocation proposed for review: Shared.

CAP-003 | SC-12 | CMP-002

Capability: Cryptographic key management. Provider: Manage platform key rotation every 180 days and restrict administrative access. Customer: Define application key owners and review application key usage. Allocation proposed for review: Shared.

CAP-004 | CP-9 | CMP-003

Capability: Backup and recovery. Provider: Perform daily backups, retain 35 days, and test restoration quarterly. Customer: Define mission recovery objectives and verify application consistency after restore. Allocation proposed for review: Shared.

CAP-005 | AU-6 | CMP-004

Capability: Security event monitoring. Provider: Review platform alerts daily and retain searchable logs for 90 days. Customer: Review mission application events and investigate application-specific alerts. Allocation proposed for review: Shared.

CAP-006 | IR-4 | CMP-004

Capability: Incident escalation. Provider: Escalate suspected platform incidents to the mission contact within one hour of triage. Customer: Maintain an incident contact and coordinate mission impact assessment. Allocation proposed for review: Shared.

Assessment summary and remediation plan

Assessment scope

Synthetic review date: 2026-09-10. Assessor: Harbor Test Assessment Team. Test activities: inspect sample configurations, interview fictional service owners and review synthetic restore and alert records. No actual assessment was performed.

FIND-001 Backup test evidence

Related component: CMP-003. Related capability: CAP-004. Control: CP-9. Fictional observation: the latest quarterly restore exercise lacks application-consistency sign-off. Test severity: Moderate. Implementation claims must remain distinguishable from verified evidence.

POAM-001 Corrective action

Owner: Harbor Test Recovery Lead. Milestone: complete a synthetic restore and document customer application-consistency validation by 2026-10-15. Status: Open. Closure evidence: a reviewed restore report with test mission owner acknowledgement.

FIND-002 Incident contact validation

Related component: CMP-004. Related capability: CAP-006. Control: IR-4. Fictional observation: mission contact confirmation is overdue. Test severity: Low. POAM-002 owner: Harbor Test Response Lead. Target: 2026-10-01. Status: Open.

Extraction boundary

Findings and remediation actions are supporting context. They are not additional components or capabilities and must not be mistaken for completed corrective actions.

Fictional authorization reference

Not a real authorization

SYNTHETIC TEST RECORD - NOT A VALID ATO. This page is provided solely to test extraction of a provider authorization reference. It has no legal, operational or authorization effect.

Reference fields

Reference ID: TEST-DECISION-001. Title: Harbor Example Platform synthetic provider decision. Issuing authority: Fictional Harbor Test Authorizing Official. Decision date: 2026-09-01. Expiration date: 2027-08-31. Scope: provider components CMP-001 through CMP-004 only.

Illustrative conditions

For this fictional scenario, POAM-001 and POAM-002 remain open and require tracking. Customer mission applications and their authorization decisions are excluded from this reference.

Signature

No signature. No seal. No actual authorizing official. Extracted metadata must remain unconfirmed until reviewed by an authorized administrator.
