

Azure IL5 · Shared services

Release notes

SYNTHETIC DEMONSTRATION ONLY. All services, measurements, decisions, identities and evidence in this package are fictional. Not Microsoft provider data, a DoD approval, an IL5 authorization, a customer entitlement, or operational evidence.

Release 1.2 | Scenario date: 2026-09-15 | Provider-managed shared services

Release 1.2 — available baseline scenario

Effective scenario date: 2026-09-01. 8 capabilities. All documents are readable and unencrypted. Availability is a scripted demo state that must be established through review and publication in the application; these files do not publish it.

Release 1.3 — proposed; two updates

1. Audit collection: adds explicit 18-hour delivery-age alerting and a secondary export attempt, retaining the same event scope, controls and component identity. Finding closure still requires the 14-day validation run.
2. Backup and recovery: clarifies quarterly restore evidence must include dependency ordering and a customer witness acknowledgment; the 24-hour RPO and eight-hour RTO remain unchanged.

No new capability, control, component, entitlement or authorization is introduced. Baseline 1.2 remains available until reviewed 1.3 is explicitly published. Customer adoption is a separate decision; do not silently advance existing consumers.

The proposed JSON differs in exactly two capability descriptions. Stable source IDs and the unchanged reference date allow a reviewable comparison.
