

Azure IL5 · Shared services

Service guide and customer onboarding

SYNTHETIC DEMONSTRATION ONLY. All services, measurements, decisions, identities and evidence in this package are fictional. Not Microsoft provider data, a DoD approval, an IL5 authorization, a customer entitlement, or operational evidence.

Release 1.2 | Scenario date: 2026-09-15 | Provider-managed shared services

Service boundary

Only the eight listed provider-operated shared services; no mission workloads or SaaS collaboration tenant.

Environment: Azure Government (fictional scenario).

Exclusions

Customer application code, databases, mission data, workstation configuration, customer subscriptions not explicitly enrolled, Microsoft 365, and any actual IL5 approval.

Synthetic hosting identity

SYNTHETIC DEMONSTRATION ONLY. Fictional hosting identity; kind=Azure; cloud=AzureUSGovernment; directoryTenantId=07900000-0000-0000-0000-000000000101; subscriptionId=07900000-0000-0000-0000-000000000102; resourceId=/subscriptions/07900000-0000-0000-0000-000000000102/resourceGroups/rg-synthetic-il5-shared-services. No live resource, tenant entitlement, or connector is asserted.

Operating team

Northstar Shared Services Demo Team | shared-services@example.invalid. This address is intentionally non-routable.

Customer onboarding and acceptance

1. Identify a fictional mission information owner and select only applicable capabilities.
2. Review the boundary, customer duties, reference conditions, and disclosed moderate finding.
3. Confirm the application records a reviewed provider release and a separate customer association; importing a file creates neither entitlement nor authority.
4. Record customer-owned controls and evidence tasks before any inheritance decision.
5. Obtain mission-level review through the normal authorization process. No synthetic reference substitutes for it.

Service change and exit

The team provides a fictional ten-business-day notice for planned customer-impacting changes. Emergency changes require a next-business-day review. On exit, agree evidence export scope, revoke demo associations, and document customer retention obligations; this package does not implement those actions.

Audit collection

Component: AZ-component-audit — Central audit collector and archive.

Coverage: AU-2, AU-6, AU-11. This is partial control support, not full control satisfaction.

Collect administrative and platform security events from the enrolled shared-service boundary; retain 90 days searchable and 365 days archived in this scenario.

Provider: Operate collector health checks every 15 minutes; reconcile ingestion counts daily; protect archived events from routine operator modification.

Shared: Agree event categories and triage escalation with each mission; investigate missing source intervals jointly within one business day.

Customer: Enable workload audit sources, review mission-specific events each business day, and set longer retention when mission policy requires it.

Review evidence: AZ-E01: seven-day collector reconciliation and archive retrieval sample.

Network protection

Component: AZ-component-network — Shared hub firewall and private routing.

Coverage: SC-7. This is partial control support, not full control satisfaction.

Inspect approved north-south shared-hub flows and maintain documented private routing for enrolled spokes.

Provider: Maintain deny-by-default hub rules, review exceptions monthly, and record firewall changes with rollback instructions.

Shared: Approve traffic purpose and route changes jointly; exercise a denied-traffic test before connecting a new spoke.

Customer: Manage application ingress, workload NSGs, DNS dependencies and endpoints outside the provider hub.

Review evidence: AZ-E02: approved rule sample, route inventory and denied-flow test.

Privileged identity

Component: AZ-component-identity — Provider operations identity service.

Coverage: IA-2, AC-2. This is partial control support, not full control satisfaction.

Control provider operator accounts with MFA and time-limited privileged access; customer identities remain a separate administration responsibility.

Provider: Require MFA for operators; review privileged membership monthly; remove provider leavers within four hours of confirmed notice.

Shared: Maintain named escalation contacts and reconcile emergency access use after every activation.

Customer: Approve mission accounts, enforce mission MFA, perform access reviews, and disable customer leavers.

Review evidence: AZ-E03: synthetic access review, activation record and leaver test.

Configuration baselines

Component: AZ-component-configuration — Shared-service configuration repository.

Coverage: CM-2, CM-3. This is partial control support, not full control satisfaction.

Version the shared-service baseline and capture approved changes; application code and mission images are excluded.

Provider: Record baseline version, approver, test result and rollback plan; compare deployed shared settings weekly.

Shared: Assess mission impact before changing shared defaults; agree maintenance windows and exception expiration.

Customer: Maintain application baselines and approve workload changes; remediate customer-owned configuration drift.

Review evidence: AZ-E04: baseline revision, drift review and approved change sample.

Encryption and key handling

Component: AZ-component-encryption — Shared-service key vault and transport configuration.

Coverage: SC-12, SC-13. This is partial control support, not full control satisfaction.

Manage fictional shared-service keys and transport settings for provider-owned endpoints only.

Provider: Restrict key administration, test rotation every 90 days, record custody, and enforce TLS 1.2 or higher on covered endpoints.

Shared: Document key ownership and coordinate rotation windows for dependent workloads; test trust-chain changes jointly.

Customer: Configure workload encryption and certificates; manage customer keys and classify data before using a covered endpoint.

Review evidence: AZ-E05: synthetic rotation rehearsal and endpoint protocol inventory.

Incident coordination

Component: AZ-component-incident — Provider incident coordination desk.

Coverage: IR-4, IR-6. This is partial control support, not full control satisfaction.

Coordinate incidents affecting the shared-service boundary using a fictional 24-hour on-call roster.

Provider: Acknowledge severity-one tickets within 30 minutes in the scenario; preserve provider records and issue initial impact notices.

Shared: Exercise incident handoffs quarterly; coordinate containment approval where provider action affects mission service.

Customer: Own mission incident declarations, regulatory reporting, application containment and mission recovery decisions.

Review evidence: AZ-E06: tabletop timeline, escalation roster and notification template.

Vulnerability management

Component: AZ-component-vulnerability — Shared infrastructure scan and patch service.

Coverage: RA-5, SI-2. This is partial control support, not full control satisfaction.

Scan provider-maintained hosts weekly and evaluate urgent advisories daily; mission applications are excluded.

Provider: Triage critical results within one business day, schedule fixes by risk, and verify remediation with a follow-up scan.

Shared: Agree outage windows and compensating controls for shared infrastructure exceptions; review overdue items weekly.

Customer: Scan and patch customer applications, containers and mission hosts; document mission risk acceptance separately.

Review evidence: AZ-E07: synthetic scan sample, patch ticket and clean rescan.

Backup and recovery

Component: AZ-component-backup — Shared configuration backup vault.

Coverage: CP-9, CP-10. This is partial control support, not full control satisfaction.

Back up shared configuration daily; exercise quarterly restore with a scenario target of 24-hour RPO and eight-hour RTO.

Provider: Monitor backup jobs daily, protect recovery copies from ordinary operator deletion, and record restore results quarterly.

Shared: Agree recovery sequence and validate shared dependencies during a joint recovery exercise.

Customer: Back up mission data and applications, define mission RTO/RPO, and validate business transactions after recovery.

Review evidence: AZ-E08: backup reconciliation and shared-configuration restore exercise.
